

Fund Manager Commentary

William Blair International Growth Fund

Fund Performance & Positioning

The William Blair International Growth Fund (Class N shares) outperformed its benchmark, the MSCI All Country World ex-U.S. IMI Index (net), during the second quarter.

Outperformance versus the Index was primarily driven by positive stock selection across most sectors. Stock selection within the Consumer Staples was particularly positive, with Shiseido Co Ltd adding to relative results in the period. Shiseido is the largest cosmetics company in Japan and fifth largest in the world. We expect a continued rebound in earnings growth after a ten year period of operational underperformance and market share loss. New management has reformed the organizational structure to place more responsibility in the hands of local managers, improved strategy execution, accelerated product development, and concentrated Shiseido's investment on prestige brands. Robust sales growth in 1QFY18 was mainly driven by rapid growth in high-priced cosmetics and successful new product launches. Health Care stock selection was also positive this quarter, bolstered by Lonza Group. After a disappointing first quarter, the share price rebounded on strong momentum from the Pharma & Biotech and Consumer Health businesses. Strong results and upbeat management guidance drove upward revisions to consensus estimates and supported share price performance.

Partially offsetting these effects was the underweight allocation to the Consumer Staples sector, coupled with below average stock selection within the Utilities and Materials sectors. Within Utilities, Orsted's share price softened following a strong first quarter. Nevertheless, as Denmark's largest utility and leading developer of offshore wind farms, Orsted

Top 10 Holdings¹ as of 6/30/18

Company Name	% of Fund
TOTAL S.A.	2.2%
Alibaba Group Holding Limited	1.9%
Tencent Holdings Limited	1.8%
Kering	1.6%
AIA Group Limited	1.6%
Shiseido Company, Limited	1.6%
Suncor Energy Inc.	1.6%
The Toronto-Dominion Bank	1.6%
Taiwan Semiconductor Manufacturing Company, Ltd.	1.3%
Daikin Industries, Ltd.	1.3%
Total Top 10	16.5%

is well positioned to win future wind projects at attractive returns given its leadership position and healthy balance sheet. Within Materials, specialty chemical manufacturer Arkema slightly detracted from relative performance despite better than expected first quarter earnings. Some of the drag on the share performance was due to the impact of rail strikes in France and rising input costs. Despite these concerns, we are confident the company can deliver on stable growth with room for further upside. During the period Financials exposure was reduced through the liquidations of Itau Unibanco, Mitsubishi UFJ Financial Group and FirstRand Ltd. This was offset by an increase to Health Care exposure through the purchases of Terumo Corp and CSL Ltd. Exposure to Industrials also increased as a result of the purchases of Airbus SE, Experian PLC and Epiroc AB. From a geographic perspective, notable adjustments were increases to Developed Europe/U.K., offset by decreases to Japan and Latin America. The Fund's weighting in Emerging Markets approximated 20% at the end of the period, down from 26% at the beginning of the period.

Market Review & Outlook

Global equity markets posted mixed results for the first half of 2018, buffeted by escalating trade tensions, the U.S. Federal Reserve's continued tightening bias and dollar strength. In contrast to the

global synchronized expansion environment of 2017, equity performance in the first six months of 2018 reflected a growing divergence, with the U.S. economy, earnings and share prices maintaining positive momentum while the rest of the world rolled over.

The benign 2017 environment of low volatility and uninterrupted monthly gains abruptly reversed course in late January 2018, as worries about the extended bull market and narrowing leadership culminated in heavy selling pressure following reports that a handful of niche equity volatility-linked ETF products had suffered significant losses, stoking fears of broader risk contagion.

As the first half progressed, investors became increasingly concerned that the Trump administration's pursuit of protectionist measures would ignite a trade war with China and potentially derail the U.S. expansion. The slowing pace of economic activity in Europe combined with increased turbulence in emerging markets also weighed on investor sentiment.

U.S. equities extended their gains during the first half of 2018 and significantly outpaced non-U.S. markets, bolstered by strong corporate earnings and tax reform. From a market cap perspective, U.S. small caps outperformed their large cap counterparts by approximately 3.5% during the period, as measured by the MSCI U.S. Standard and Small Cap indices. In addition to being less exposed to trade disputes given lower overseas revenues, U.S. small caps were expected to benefit more from tax reform: according to Bloomberg, for the three years ended December 2017, S&P SmallCap 600 Index companies had an average effective tax rate 4.3% higher than that of S&P 500 Index companies.

Non-U.S. developed market equity performance was hampered by negative returns in Europe amid softening economic data and renewed political turmoil in Italy. The euro depreciated approximately 3% versus the dollar in 1H18, reflecting these concerns in addition to expectations for prolonged monetary stimulus from the European Central Bank, which announced that interest rates would remain at record lows through the summer of 2019.

Harkening back to the 2013 taper tantrum episode, emerging markets equities and currencies were hit by a significant rise in investor outflows during the first half of the year. The stronger dollar and prospect of higher U.S. interest rates had a particularly detrimental effect on countries with larger current account deficits and dollar-denominated debt, including Argentina and Turkey.

Political uncertainty and a deteriorating economic growth outlook also weighed on emerging markets returns in the first half. Brazil's nationwide truckers' strike was projected to shave a full percentage point off 2018 GDP growth, threatening the country's nascent economic recovery and further clouding the reform outlook ahead of the presidential election this fall.

Although Chinese equities held up better than most emerging market countries for the six-month period, investors became increasingly wary of escalating trade tensions as the first wave of U.S. tariffs on \$34 billion of Chinese exports was scheduled to take effect on July 6.

Technology and energy were the top performing sectors on a global basis during 1H18, while telecom, financials and consumer staples underperformed. Within emerging markets, energy was the only sector in positive territory for the six-month period, benefiting from the rebound in oil prices.

There is now a great deal of uncertainty about how the recently announced trade tariffs will impact intermediate term economic activity. Despite some market skepticism, global growth remains broad based and robust as we head into the second half of 2018. While global manufacturing PMIs declined from unsustainably elevated levels in February and March, the latest readings suggest that we are nearing the end of the in-cycle deceleration to levels in line with ongoing growth. Near-term economic fundamentals indicate that the current economic expansion has further to run. In times of economic expansion such as the current one, we expect companies to continue to post robust earnings growth. However, earnings growth cannot continue to accelerate at the same pace we experienced over the past several quarters, especially in the U.S., where acceleration has been quite pronounced. European corporates have also enjoyed relatively strong

earnings growth, which is also likely to continue but at moderately slower rates in the near term.

While the underlying economy remains robust and economic indicators continue to signal positive momentum, escalating trade war rhetoric will likely have substantial consequences on market volatility, inflation, and growth dynamics over the coming quarters. As examples, tariffs on Canadian lumber are adding to higher costs for wood, which are fueling price increases of up to \$9,000 for a new single-family home, according to the National Association of Homebuilders. Elsewhere, prices of washing machines sold in the U.S. surged by nearly 8.5% this year – the first increase since 2012 – after the U.S. administration restricted imports earlier this year.

More broadly, some U.S. companies are reportedly using the threat of new tariffs as a reason to raise prices. In short, tariffs amount to either a tax on consumption or corporate margin deterioration if firms choose to absorb some portion of cost increases. In aggregate, it worsens the tradeoff between growth and inflation, and will likely lead to tighter monetary policy. Much of this has not played out yet, because the U.S. administration has moved only recently. However, these effects will begin to manifest themselves over the coming quarters, and it is quite possible that this will bring us closer to the end of the current economic expansion cycle.

Longer term, we fear the U.S. administration's unilateral view of trade policy is suggesting an end to the decades-long building of integrated global markets and supply chains. If the U.S. chooses to limit or regulate trade however it sees fit, regardless of what agreements it may have signed in the past, trade and investment will become more volatile and more politicized. Multinationals from around the world will be more inclined to disentangle their operations from the U.S. The impact of this will only be revealed gradually over the next several years but could imply meaningful changes to competition, quality, and innovation.

From a portfolio strategy perspective, we believe emerging markets (EMs) are susceptible to further downside volatility in the second half of 2018 amid persistent dollar strength as interest rates and growth differentials continue to favor the U.S., and the Federal Reserve maintains its tightening bias.

Positioning within our ACWI-oriented strategies has generally reflected our more cautious outlook, with reduced EM weightings in favor of increased developed market exposure, primarily in Europe. Within our dedicated EM strategies, we have maintained overweighted positions in China and India, and moderated exposures to Brazil and South Africa. Within China, our positioning continues to emphasize domestically-oriented consumer, healthcare and technology companies that we believe are well positioned to benefit from the economy's ongoing transition to a consumption and services-driven growth model.

DISCLOSURE

The Fund's returns will vary, and you could lose money by investing in the Fund. International investing involves special risk considerations, including currency fluctuations, lower liquidity, economic and political risk. Investing in emerging markets can increase these risks, including higher volatility and lower liquidity. Investing in smaller and medium capitalization companies involves special risks, including higher volatility and lower liquidity. Small and mid-cap stocks are also more sensitive to purchase/sale transactions and changes in the issuer's financial condition. The Fund invests most of its assets in equity securities of international growth companies where the primary risk is that the value of the equity securities it holds might decrease in response to the activities of those companies or market and economic conditions. Diversification does not ensure against loss.

The Morgan Stanley Capital International (MSCI) All Country World Ex-U.S. IMI Index (net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets, excluding the United States. This series approximates the minimum possible dividend reinvestment. The Index is unmanaged, does not incur fees or expenses, and cannot be invested in directly.
