

Fund Manager Commentary
William Blair Bond Fund

Fund Performance

The William Blair Bond Fund (Class N shares) outperformed its benchmark, the Bloomberg Barclays U.S. Aggregate Index, during the third quarter. A couple of factors contributed to the Fund's performance relative to the Index during the quarter. Sector allocation contributed to results, as the Fund was underweight to fixed-rate Treasuries and overweight to corporate bonds. Security selection of corporate bonds contributed to performance, including positions in longer-maturity bonds issued by Verizon, Mexichem, ConocoPhillips, and Brookfield Asset Management. Security selection of agency mortgage-backed securities impacted results favorably, as the Fund emphasized higher-coupon segments that outperformed lower-coupon alternatives. There were some factors that detracted from performance during the quarter. Positions in bonds issued by Triumph Group and Jaguar Land Rover hindered results.

Market Review

The Bloomberg Barclays U.S. Aggregate Index returned 0.02% during the third quarter of 2018, as the combination of the market's yield levels and declining risk spreads were positive effects that offset the impact of rising interest rates. The Index returned -1.60% year-to-date ending 9/30/18 as interest rates rose across all tenors.

The Federal Open Market Committee (FOMC) increased the target range of the federal funds rate by 0.25% during the third quarter, as the Committee increased the range to 2.00% - 2.25% during its September meeting. This marked the third hike of the fed funds rate during 2018, and the fed funds futures

Total Top 10	28.4%

market carried an implied probability that the FOMC will raise the target range of the federal funds rate by 25 basis points one additional time during 2018: following its December meeting.

The FOMC continued to execute its plan to gradually shrink its balance sheet during the third quarter, and effective October 1, 2018 the FOMC will permit the balance sheet to shrink at its fastest pace: \$50 billion per month. At this pace, the FOMC expects to slow the pace of reinvestments of agency mortgage-backed securities (MBS) to a *de minimis* level.

The agency MBS Index generated negative total returns but outperformed Treasuries on a duration-adjusted basis during the third quarter. The MBS Index also generated negative total returns year-to-date while also underperforming comparable-duration Treasuries. Over both time periods, the weak performance has been dominated by lower-coupon 30-year pools that the FOMC has targeted in its asset purchase programs to suppress mortgage rates, such as 30-year 3.0%, 3.5%, and 4.0%. Higher-coupon segments of the market have generated positive total returns, outpaced comparable duration

Treasuries, and outperformed those lower-coupon segments during the third quarter and year-to-date.

Corporate bonds experienced gains and outperformed other segments of the market during the third quarter. High yield corporate bonds continued to outperform investment-grade corporate bonds, and the most-speculative segments of the market continued to generate strong results, with CCC-rated bonds having posted a return of 5.99% year-to-date.

Outlook

We believe that the Federal Open Market Committee (FOMC) will continue to raise the federal funds rate at a measured pace over the next 12 months. The U.S. economy is growing; forecasters predict a real GDP growth rate of approximately 3.0% during 2018. In addition, the U.S. labor market is adding jobs and the unemployment rate is at 3.7%. Estimates of wage inflation are roughly 3.5%, while estimates of core personal consumption expenditures (PCE) have been roughly 2.0%. Macroeconomic theory predicts that a robust labor market creates wage inflation, which in turn spurs broader inflation. We believe that the FOMC will raise rates so long as inflationary pressures do not deteriorate.

We believe that the FOMC's plans to reduce the size of the Fed's balance sheet will be executed with little disruption to the markets. We believe this is attributable, in part, to strong communication efforts, adequate advance notice, and the absence of security sales to reduce the balance sheet. However, we believe the lower-coupon MBS that was purchased by the Fed will underperform higher-coupon alternatives when the FOMC ends their campaign of purchasing agency MBS.

U.S. Treasury Inflation-Protected Securities (TIPS) have market-implied breakeven inflation rates that are at levels within the FOMC's stated target range of 2.0%–2.5%. We believe TIPS are an attractive alternative to fixed-rate Treasuries to mitigate the effects of rising rates driven by accelerating inflationary pressures.

We believe that spread sectors remain attractive relative to Treasuries over the intermediate-to-long

term. Corporate risk premiums are at levels near their longer-term averages, and we believe opportunities remain after risk spreads increased year-to-date. Risk premiums of higher-coupon segments of the agency MBS market remain attractive. In addition, we believe Treasuries are likely to struggle as the FOMC tightens the federal funds rate and reduces the scale of their asset purchases.

We believe that higher-coupon segments (30-year MBS coupon rates of 5.0% and above) of the agency MBS market offer compelling value. These segments of the agency MBS market offer attractive spreads and a defensive duration profile. The key risk of these securities is that the underlying borrowers are in-the-money to refinance their loan. We believe this risk can be mitigated by focusing on pools comprised of borrowers that do not have the economic incentive to refinance their loans: low-loan balance pools.

We believe that there are opportunities in the corporate bond market as risk spreads increased to levels close to Index's longer-term average. We remain concerned about company-specific risks, including shareholder-friendly activities such as leveraged finance mergers and acquisitions, large share repurchases, and special dividends. Importantly, we do not believe the market will enter a period of excessive LBO activity.

DISCLOSURE

The Fund's returns will vary, and you could lose money by investing in the Fund. Investing in the bond market is subject to certain risks including market, interest-rate, issuer, credit, and inflation risk; investments may be worth more or less than the original cost when redeemed. Current conditions may result in a rise in interest rates, which in turn may result in a decline in the value of the fixed income investments held by the fund. Convertible securities may be called before intended, which may have an adverse effect on investment objectives. The Fund's investments in below investment grade securities may have additional credit risk. In some cases, below investment grade securities may decline in credit quality or go into default. High-yield, lower-rated, securities involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not.

The Bloomberg Barclays U.S. Aggregate Index is an unmanaged index that represents the investment grade bond market. It is composed of securities from the Bloomberg Barclays Treasury, Government-Related, Corporate and Securitized Indices. The Index is unmanaged, does not incur fees or expenses, and cannot be invested in directly.
