

William Blair International Growth Fund Fund Manager Commentary

Market Review

After a strong performance in 2021, global equities declined (-5.47%) in the first quarter (as measured by the MSCI ACWI IMI) amid increased market volatility induced by concerns over inflation, rising interest rates, and heightened geopolitical tension in Eastern Europe. In January, concerns over rising inflation and hawkish moves by the Federal Reserve drove a sharp style rotation into lower-value, lower-growth-oriented securities. Volatility continued in February as the Russian invasion of Ukraine prompted a coordinated response by Western countries in the form of firm sanctions targeted at Russia's financial system. The sanctions on Russia rendered Russian equities and the ruble un-investable with fears of contagion to other markets. In this environment, growth equities significantly underperformed value-oriented equities (the MSCI ACWI IMI Growth declined -9.83% while the MSCI ACWI IMI Value declined -1.08%). This was evident from a global sector perspective as consumer discretionary (-11.63%) and information technology (-10.37%) declined while energy stocks strengthened (+22.64%) on stronger crude oil prices.

Developed markets declined (-5.32%) as measured by the MSCI World IMI. U.S. equities declined (-5.38%) as the Russian invasion of Ukraine amplified existing concerns over rising inflation and interest rates. The Federal Reserve approved its first interest rate increase (0.25%) in over three years with further hikes expected throughout the rest of the year. Europe ex-U.K. plunged (-10.04%) as heightened concerns over the availability of Russian energy imports to Europe weighed on investor sentiment. In addition to targeting Russia's key financial institutions, the U.S. and European allies also cut Russia from the SWIFT International Payment system. Germany also announced it would be halting the certification of the Nord Stream 2 gas pipeline from Russia.

Emerging markets declined (-6.65%) with mixed returns across countries. Russian equities plunged as the broad range of sanctions imposed on their economy weighed heavily on the ruble and market returns. China sharply declined primarily in March (-14.27% for the quarter) amid a spike in COVID-19 cases and newly imposed lockdowns across major cities. Conversely, Latin America generated strong returns for the quarter (+26.34%) with broad outperformance across countries. Oil exporters and commodity beneficiaries such as South Africa (+19.30%), Kuwait (+18.56%), and Saudi Arabia (+16.64%), also outperformed.

Fund Performance

Underperformance by the William Blair International Growth Fund (Class N shares) versus the MSCI ACWI ex. US IMI index was primarily driven by negative stock selection across most

Top 10 Holdings¹ as of 3/31/2022

sectors. The industrials and healthcare sectors were the largest sources of negative relative returns.

Within healthcare, WuXi Biologics and Straumann detracted from relative returns. WuXi Biologics offers a full range of research and manufacturing services for biologic drugs designed to help clients improve R&D efficiency, shorten development timelines, and lower costs. The company was added to the U.S. Commerce Department's Unverified List, and is therefore restricted from purchasing bioreactors and hollow fiber filters from U.S. suppliers because regulators have not been able to verify appropriate (i.e. non-defense related) end-market use due to inability to conduct an on-site inspection. While this restriction appears to be manageable from a fundamental perspective, the geopolitical risk is likely to remain at the forefront of investment considerations for the stock for an extended period, limiting upside potential from valuation expansion should the company be able to successfully resolve this issue and continue along its growth trajectory. The position was sold as a result.

Straumann was an additional source of underperformance as the company's stock price declined despite finishing 2021 on a high note with over 20% organic growth in the fourth quarter and second-half profitability coming in ahead of estimates. The

company is the global leader in esthetic dentistry, and the categories that the company participates in—implants, clear aligners, and digital dentistry—are growing well above global dental market rates. Straumann is more than just a products company. As a total solution provider, it offers training, support, and a wide range of services to the dental industry all over the world. In addition, the company is investing in technology and expanding capacity to make clear aligners a second long-term growth pillar.

Within the industrials sector, Atlas Copco detracted from relative results. Atlas Copco is a well-managed, consistently profitable provider of compressors, vacuum solutions, and air treatment systems within the industrials sector. The company reported solid quarterly results despite supply chain constraints impacting growth. New orders were up 26%, but operating profit margins fell short of expectations as supply chain constraints and COVID-related labor challenges weighed on profits. The company continues to offer a sustainable growth profile with an enviable business model and strong competitive advantages. The near term will likely be choppy, but backlogs are swelling as deliveries significantly lag orders. As a result, near-term growth will be held back but the length of the upcycle will likely be extended.

Partially offsetting these effects was an underweight to emerging markets coupled with positive stock selection within the energy sector. Within energy, Reliance Industries and Tenaris added to relative results. Reliance is an Indian conglomerate with diverse businesses in energy, telecom, and retail businesses. It benefited from the COVID re-opening in India, leading to positive operating leverage across its businesses and record earnings. Reliance's ongoing transformation from an asset and capex heavy cyclical energy business to more diversified, end-consumer business with a large and expanding total addressable market- is underappreciated, in our view. We believe the market underestimates the monetization potential at Jio, its telecom and digital services business with strong ecosystem benefits as a dominant provider of connectivity, content, and commerce.

Tenaris, the global leader in seamless pipe used for drilling oil and gas wells, was another source of outperformance within the sector. Fourth-quarter earnings increased by 27% sequentially and margins expanded, leading to results that were better than consensus. The company is executing well, managing cost inflation, keeping utilization high, and gaining market share. In addition, we see room to improve operations from digitalization and production efficiencies going forward.

Positioning

For the period, financials exposure was increased through the purchases of several leading banks, including Toronto Dominion Bank, DBS Group, and KBC Group. TD is the largest Canadian bank and the fifth-largest in North America. The company has proved to be a high-quality compounder, benefitting from an oligopolistic market structure that leads to high returns on equity with strong gearing to higher interest rates. DBS is the largest bank in Singapore with a strong presence across Asia. The Singapore market is highly rationale and dominated by three local market banks that have between 60% and 70% market share across product lines. DBS has an

exceptional deposit franchise, and with a CASA (Current Account Savings Account) ratio of 75%, it stands out on a global basis. KBC is a retail-focused bank and insurer based in Belgium with operations in five core markets: Belgium, Czech Republic, Slovakia, Hungary, and Bulgaria. It is one of the most well capitalized banks in Europe and has a top four position in each of its core markets. These increases were primarily offset by a decrease to the information technology, industrials, and consumer discretionary sectors. From a geographic perspective, notable adjustments were increases to the U.K., offset by a reduction in Emerging Markets Asia. The portfolio's weighting in Emerging Markets approximated 18% at the end of the period, down 2% from the beginning of the year.

Outlook

As we begin the second quarter of 2022, we reflect on the unique environment we have experienced the last two years. The nature of the economic cycle, originally due to the COVID pandemic, has been exacerbated. We've experienced an extreme closing and reopening of the global economy, accompanied by unprecedented liquidity, and pronounced rotations in style – first with growth outperforming strongly, and more recently value charging back. Finally, the Russian invasion of Ukraine continues to impact the economy and the markets and in response we have needed to reassess our outlook leading into this year.

Similar to our forecast earlier this year, we continue to see a natural slowing of economic growth from very high levels seen in 2020; but also, rising inflation, which implies a further deceleration of earnings growth. We also continue to analyze the rising interest rate environment and its relationship to valuations.

Growth – Post-Russian Invasion

In terms of growth, we continue to see risks of slower economic and corporate profit growth than we had originally expected. Importantly, in contrast to our prior outlook, we now expect materially lower growth in Europe. Leading into the year, most European economies remained much below their pre-pandemic output trajectory and now the Russian invasion of Ukraine has created further downward pressure. Particularly in Eastern and Central Europe, expanding past Russia, into Hungary and Poland, we'll expect continued acceleration in inflation, currencies under pressure and higher interest rates.

Within the U.S., we see less impact and expect growth to remain at broadly similar levels as in our pre-Russian invasion case, which is a significant sequential deceleration in economic activity, from approximately 5.5% growth that we observed in 2021 down to closer to 2.5% growth rate by the end of the year. Corporate profit growth expectations seem reasonable and remain at the highest level for most major countries.

Within China, our outlook is mixed. We've seen a resurgence of COVID and lockdowns, which we expect to impact economic activity and weakening of growth in the first half of this year,

coupled with potential geopolitical risk. In contrast, we think the government's focus on a stable economic environment will lead to a moderate fiscal and monetary stimulus as well as potential for some easing of regulatory pressures. Valuations in China are also relatively attractive in our view, after a difficult 2021.

Inflation

The ongoing lockdowns and the military conflict that we now have in Europe has prompted us to revise our inflation projections further. We originally expected inflation to peak in early summer. We now expect inflation to peak at a higher rate in the later part of this year and to rollover thereafter. Of course, wage pressures were something that we were going to monitor on an ongoing basis, and that that remains a key variable to watch in the U.S. What that means for equity markets, is that corporate earnings growth, especially outside the U.S., is expected to decelerate further throughout much of 2022, which will put further downward pressure on multiples.

Valuation and Style Performance

Thus far in 2022, we've seen one of the most significant style rotations we have experienced in multiple decades, which leads us to a discussion regarding equity valuations. The general relationship between rates and valuations holds, and despite the influences of the conflict and persistent inflation, we do believe that we are still in a long-term economic recovery. Thus, we expect gradual monetary tightening and removal of excess liquidity, consequently leading to further multiple contraction as the expansion continues and rates go higher.

This has direct implications for the performance of Growth equities vs Value equities, and we have seen this play out significantly in the beginning of 2022. Valuation as a factor has been by far the strongest driver of performance year to date.

Does this imply that the very long run of quality growth over value is over? We don't think so. Many of the drivers of the outperformance of Growth are still in place: positive but lower economic growth, low (albeit rising) interest rates, and a competitive landscape in the real economy that acknowledges the structural advantages of some areas of the economy over others, as well as those of differentiated, innovative business models. As it relates to interest rates, as measured by the 10-year yield, we believe would need to meaningfully rise from current levels (+300bps), to significantly affect relative future profitability and future investment premium.

And as we look forward, what hasn't changed? We think the innovation and disruption cycle hasn't changed, and arguably, has even accelerated. The dynamic shifting of corporate winners and losers remains a constant, and again, if anything, may be accelerated. Importantly, durability or improvements in corporate competitive advantage will likely remain underappreciated.

We believe this environment will create an important backdrop for active investing. Understanding companies with differentiated business models, unique cultures and durable competitive advantages will increasingly be crucial to determining investment performance in this complex environment.

INVESTMENT PERFORMANCE (AS OF 3/31/22)

IMPORTANT DISCLOSURES

The Fund's returns will vary, and you could lose money by investing in the Fund. International investing involves special risk considerations, including currency fluctuations, lower liquidity, economic and political risk. Investing in emerging markets can increase these risks, including higher volatility and lower liquidity. Investing in smaller and medium capitalization companies involves special risks, including higher volatility and lower liquidity. Small and mid-cap stocks are also more sensitive to purchase/sale transactions and changes in the issuer's financial condition. The Fund invests most of its assets in equity securities of international growth companies where the primary risk is that the value of the equity securities it holds might decrease in response to the activities of those companies or market and economic conditions. Diversification does not ensure against loss.

The Morgan Stanley Capital International (MSCI) All Country World Ex-U.S. IMI Index (net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets, excluding the United States. This series approximates the minimum possible dividend reinvestment. The Index is unmanaged, does not incur fees or expenses, and cannot be invested in directly.

This content is for informational and educational purposes only and not intended as investment advice or a recommendation to buy or sell any security. Investment advice and recommendations can be provided only after careful consideration of an investor's objectives, guidelines, and restrictions.

Please carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information is contained in the Fund's prospectus and summary prospectus, which you may obtain by calling +1 800 742 7272. Read the prospectus and summary prospectus carefully before investing. Investing includes the risk of loss.
