

William Blair International Growth Fund Fund Manager Commentary

Market Review

Global equities advanced in the first quarter (the MSCI ACWI IMI returned +6.95% for the quarter in USD terms), despite a volatile period amid turmoil in the banking industry. From a global sector perspective, information technology and communication services rallied during the period (+19.97% and +16.50%, respectively, as measured by the MSCI ACWI IMI index), while energy lagged on weaker energy prices (-3.24% as measured by the MSCI ACWI IMI index). Growth equities outperformed value-oriented equities (the MSCI ACWI IMI Growth returned +12.95% for the quarter, while the MSCI ACWI IMI Value returned +1.30%) as the concerns over banking contagion and resulting drop in bond yields caused a shift in market leadership toward growth segments of the market.

U.S. equities advanced during the period (+7.21% for the quarter as measured by the MSCI USA IMI) propelled primarily by technology stocks, while financials remained under pressure. With a turbulent quarter that stemmed from the demise of Silicon Valley Bank, investor sentiment was boosted by the swift coordinated actions of the Federal Reserve and central banks to help restore confidence in the banking system, coupled with hopes that the Federal Reserve could ease monetary policy tightening earlier than anticipated as a result of the financial instability and potential impact to the U.S. economy. While the Fed further slowed the pace of rate hikes to 25 basis points, Powell flagged the need to do more work to combat inflationary pressures, reiterated the higher-for-longer messaging, and noted that the labor market remains too tight.

European equities outperformed global markets for the quarter (+10.24% for the quarter as measured by the MSCI Europe IMI). While the ECB's interest rate hike of 50 basis points was higher than expectations given the uncertainty after the collapse of Silicon Valley Bank, European stock markets rallied on President Lagarde signaling that the ECB would be cautious about further rate increases. The European banking sector sold off during March following UBS's acquisition of Credit Suisse. The Swiss regulator's decision to write down Credit Suisse's additional tier 1 bonds also sparked a decline in the banking sector. Within the U.K., equities advanced (+5.89% for the quarter as measured by the MSCI United Kingdom IMI) after GDP showed a 0.1% expansion in the fourth quarter, narrowly avoiding recession. Similarly, Europe ex-U.K. advanced (+11.63% for the quarter as measured by the MSCI Europe ex-U.K. IMI), as Euro area CPI plunged to 6.9% in March, down from 8.5% in the previous month.

Emerging markets gained (+3.94% for the quarter as measured by the MSCI EM IMI index) with mixed performance across regions. Within Asia, Chinese equities advanced (+4.32% for the quarter as measured by the MSCI China IMI index) on continued momentum in its economic recovery in March, as the non-

Top 10 Holdings¹ as of 3/31/2023

manufacturing PMI rose to 58.2 alongside a notable increase in activity in the construction sector. Taiwan and Korea were the strongest contributors to performance within EM Asia, on a relative basis (+14.88% and +10.35%, respectively as measured by MSCI Taiwan IMI and MSCI Korea IMI). Similarly, Latin America returns gained (+4.12% for the quarter as measured by the MSCI EM Latin America IMI), driven primarily by strength in Mexico (+20.47% for the quarter as measured by MSCI Mexico IMI). EMEA declined (-1.17% for the quarter as measured by the MSCI EM EMEA IMI) stemming from broad weakness across countries, particularly Turkey (-12.56% during the quarter as measured by MSCI Turkey IMI).

Fund Performance

The William Blair International Growth Fund (Class N shares) outperformed its benchmark, the MSCI ACWI ex US IMI (net), during the first quarter. Outperformance versus the MSCI ACWI ex USA IMI index (net) was driven by a combination of allocation and stock selection effects. While outperformance was driven by positive stock selection across most sectors, an overweight to the information technology and industrials sectors and an underweight to the financial sector, coupled with above-average

stock selection within the information technology, healthcare, and consumer discretionary sectors drove relative returns for the period.

Within information technology, hardware positions including Infineon Technologies were the primary drivers of returns. Infineon Technologies is a German semiconductor manufacturer with a high exposure to automotive semis. It outperformed on strong fundamental results led by growth in its auto segment of 35% year-over-year, and expectations for margin improvement in 2023. Infineon is a critical enabler of electric vehicles and renewable energy, and we believe it is positioned to benefit from secular tailwinds from rising electric content in autos.

Positive selection in consumer discretionary was broad based and led by Amadeus IT Group and MercadoLibre. Amadeus is the leading provider of IT solutions to the travel industry, it benefited from the continued recovery in air travel and hospitality and cost-cutting efforts that have improved margins; revenue per booking is now 9% higher than pre-COVID levels. MercadoLibre, the dominant e-commerce platform in Latin America, outperformed on stronger-than-expected fundamentals including revenue growth, which was up 41% over the past year, and margin expansion to 48.6%.

Partially offsetting these effects was an underweight to the communications services sector and stock selection in energy including Tenaris and Reliance Industries. Tenaris is the global leader in seamless pipe used for drilling oil and gas wells. While fundamental results were strong including 76% growth in revenue year-over-year, the stock was down in March on lower energy prices. Tenaris continues to make investments to structurally improve its operations and the pipe market overall. Reliance detracted from overall results as Indian equities broadly underperformed.

Positioning

During the quarter, exposure to the consumer sectors were increased slightly, primarily through purchases of Kweichow Moutai and Ferrari. Moutai is the leading premium Baijiu (a white spirit made from sorghum and wheat) company in China. Despite volume declines in the Chinese liquor sector, the premium segment continues to grow both in volume and price growth and is benefiting from increasing Chinese consumption as China moves beyond COVID. We expect Moutai to lead industry growth on pricing given its ultra-high brand equity and limited supply. Ferrari is an Italian sports car manufacturer that is positioned as an ultra-luxury goods company with strong pricing power and resilient demand resulting in what we view to be a long-term value creator with a relatively narrow range of outcomes. Ferrari's competitive advantages are centered around product innovation and the strength of the brand, which results in a captive customer base where approximately 60% of sales are to existing Ferrari owners. Returns and cash conversion are strong, and we expect continued margin improvements driven by improving product mix, operating leverage, and improving supply chains. Exposure to information technology was also increased through additions to existing technology hardware positions including TSMC, the only

independent foundry capable of manufacturing the most complex, technologically advanced chips. As a result of those changes, the allocation to emerging Asia increased in the period.

These increases were offset by reductions in financials and energy including the sales of KBC Group and Neste. KBC is a retail-focused bank and insurer based in Belgium; despite its position as one of the most well-capitalized banks in Europe, it was sold as the pressures on smaller U.S. banks have made the fundamental outlook for KBC more challenging including higher costs to maintain high-quality deposits and a reduction in loan growth that is not reflected in valuations. Neste is a Northern European refinery and fuel station operator with significant exposure to renewable fuels, the position was exited as we believe its first-mover advantage on input costs is waning and expansion plans will pressure intermediate-term results.

Outlook

The collapse of Silicon Valley Bank and Credit Suisse's demise have exposed some of the feared risks related to the severity of central banks' monetary tightening. Despite U.S. regional banks still facing headwinds and signs of stress in the system not fully subsided, we do not believe that full contagion across the banking sector is a likely outcome. We are, however, monitoring the private debt and commercial real estate markets for signs of systemic risk.

As we settle into the second quarter of 2023, we reassess our projections for the remainder of the year and analyze how these implications will affect our outlook on risks of recession, central banks' likelihood to pivot away from restrictive monetary policy sooner than expected, and revised corporate earnings expectations.

Despite the instability in the financial sector, the Federal Reserve and global central banks remain vigilant in their fight against inflation, as evidenced by the ECB's and U.S. Fed's further rate increases in March. We believe the Fed will be reluctant to move back on its monetary policy settings by lowering interest rates, however that does not mean it will not provide liquidity, which we have seen over the last several weeks.

In this tighter economic environment, the likelihood of recession is increasing. Banking stress is unambiguously negative because it creates difficulties in lending to small and midsize companies, which tend to utilize smaller banks due to the ease of access to credit as opposed to larger banks. In the current environment, the balance sheets of many regional banks are suffering from the mismatch of assets and liabilities. As long as this mismatch persists, we can expect to see a curtailing of lending and other forms of credit activity, which will dampen growth of regional and local economies.

As a result, we are likely to see a deceleration in economic activity (approximately 1% of GDP growth). This slowdown in economic growth will also have downward pressure on corporate earnings. Our base case assumed a deceleration in corporate earnings through third quarter and we now expect additional downward pressure, how far it extends toward the

end of the year we believe is still too early to tell. Consensus for 2023 corporate profit growth expectations now stands at a touch below +2%, down from about +10% one year ago.

Despite lowering expectations of economic and corporate profit growth, earnings multiples for the most part have expanded this year. This is a bit of a surprise to us, and likely due to the assumption that real rates and inflation have peaked. We would not expect valuations to further rerate materially until there is some confidence of at what level growth troughs.

We also think it is relevant to highlight China given its earlier-than-expected reopening during the first quarter. While the reopening brought renewed optimism and the beginning phases of recovery, the pace of growth could be slow in the near term given the time needed to repair consumer confidence, which dropped to a 20-year low in late December. The government continues to deliver supportive yet measured initiatives on both fiscal and monetary fronts to stimulate the economy, including stabilizing the property market (which fell 30%-40% last year) while considerate of persistent structural issues.

The government is also keen to support consumption and youth employment, where unemployment rates went up substantially last year to 20% versus 5-6% for the general population due to covid lockdowns and internet industry regulations. Recent messaging has also indicated a boost in supportive measures in the private sectors and the platform economy (signaling the regulatory measures are easing and stabilizing) and continue to push for technology advancement and energy transition. Additionally, the excess savings in China over the last two to three years should support the recovery of consumption, the property market and investment.

While U.S.-China relations and geopolitical risks have not abated and continue to weigh on market valuation, policy support, a stabilizing regulatory environment, and the potential for earnings recovery due to the reopening could be supportive for investors in 2023.

As previously discussed, inflation and rates have shifted upward, and the forces that caused this may be beyond just this current pandemic-influenced economic cycle. We believe the environment has changed enough that market leadership will be broader in the coming years as compared to the pre-pandemic era. Our focus remains to identify a diversity of mis-priced value-creating companies across the wide array of our opportunity set.

INVESTMENT PERFORMANCE (AS OF 3/31/23)

	QTR	YTD	1 Y	3 Y	5 Y	10 Y
Class I (SI: 10/01/99)	8.39%	8.39%	-7.85%	11.73%	3.68%	5.33%

IMPORTANT DISCLOSURES

The Fund's returns will vary, and you could lose money by investing in the Fund. International investing involves special risk considerations, including currency fluctuations, lower liquidity, economic and political risk. Investing in emerging markets can increase these risks, including higher volatility and lower liquidity. Investing in smaller and medium capitalization companies involves special risks, including higher volatility and lower liquidity. Small and mid-cap stocks are also more sensitive to purchase/sale transactions and changes in the issuer's financial condition. The Fund invests most of its assets in equity securities of international growth companies where the primary risk is that the value of the equity securities it holds might decrease in response to the activities of those companies or market and economic conditions. Diversification does not ensure against loss.

The Morgan Stanley Capital International (MSCI) All Country World Ex-U.S. IMI Index (net) is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets, excluding the United States. This series approximates the minimum possible dividend reinvestment. The Index is unmanaged, does not incur fees or expenses, and cannot be invested in directly.

This content is for informational and educational purposes only and not intended as investment advice or a recommendation to buy or sell any security. Investment advice and recommendations can be provided only after careful consideration of an investor's objectives, guidelines, and restrictions.

Please carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information is contained in the Fund's prospectus and summary prospectus, which you may obtain by calling +1 800 742 7272. Read the prospectus and summary prospectus carefully before investing. Investing includes the risk of loss.
