

4Q 2022 Update

William Blair Emerging Markets ex China Growth Fund

OBJECTIVE

Capital Appreciation

CHARACTERISTICS

The Fund seeks to invest in companies across emerging markets excluding China and the market cap spectrum with superior quality and growth characteristics relative to competitors.

WHY CONSIDER THIS FUND?

- Provides a diversified all cap portfolio with consistent small cap exposure and a broad allocation to sectors and countries— including frontier markets
- Allows investors to make allocation decisions between China and the rest of emerging markets
- Managed by a seasoned team with decades of emerging markets experience

¹**Weighted Average Market Capitalization:** The Weighted Average Market Capitalization for a portfolio is calculated as the average market capitalization of the stocks within the portfolio, weighted by the amount of each stock owned. **Unweighted Median Market Capitalization:** This calculation represents the median market capitalization of the stocks in the portfolio, regardless of the amount of each stock owned. **P/E (Price/Earnings) Ratio:** A stock with a higher P/E ratio would be considered more expensive relative to another stock with a lower P/E. An investor may pay a higher P/E for a stock for several reasons including, but not limited to, an expectation that the company possesses higher returns on invested capital, less economic sensitivity, higher consistency of earnings and/or higher earnings growth potential. **EPS Growth (Long-Term Projected):** This measure represents the weighted average of forecasted growth in earnings expected to be experienced by stocks within the portfolio over the next 3-5 years. This projected earnings growth should not be considered an indication of future fund performance. **Since Inception Turnover:** This figure reflects the portfolio's trading activity by calculating the amount of the portfolio's holdings bought or sold over the prior year, expressed as a percentage of the portfolio's average market value. Turnover figures may be related to the amount of trading costs experienced by the portfolio. ²Cash represents cash and any short-term or overnight investments held by the Fund.

³The Morgan Stanley Capital International (MSCI) Emerging Markets ex-China IMI Index (net) is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets excluding China. This series approximates the minimum possible dividend reinvestment. It is not possible to directly invest in an unmanaged index.

⁴Top ten holdings are shown as % of total net assets. Sector, Market Cap, and Geographic Diversification charts show % of investments for the Fund and its benchmark Index and exclude cash equivalents. Sector diversification calculated by William Blair based on Global Industry Classification Sectors (GICS). Market capitalization and geographic distribution are calculated by William Blair. Weights may vary over time as benchmark index weights shift.

⁵Information about the Fund's holdings should not be considered investment advice. There is no guarantee that the Fund will continue to hold any one particular security or stay invested in any one particular sector. Holdings are subject to change at any time.

⁶These amounts are calculated using float-adjusted market capitalizations.

Risks: The Fund involves a high level of risk and may not be appropriate for everyone. You should only consider it for the aggressive portion of your portfolio. The Fund's returns will vary, and you could lose money by investing in the Fund. The Fund holds equities which may decline in value due to both real and perceived general market, economic, and industry conditions. Investing in securities of smaller companies tends to be more volatile and less liquid than securities of larger companies. International investing involves special risk considerations, including currency fluctuations, higher volatility, lower liquidity, economic and political risk. Investing in emerging markets can increase these risks. The securities of emerging market companies may be subject to greater volatility and less liquidity than companies in more developed markets. Individual securities may not perform as expected or a strategy used by the Adviser may fail to produce its intended result. Currency rates may fluctuate significantly over short periods of time and may reduce the returns of a portfolio. **Please carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information is contained in the Fund's prospectus and summary prospectus, which you may obtain by calling +1 800 742 7272. Read the prospectus and summary prospectus carefully before investing. Investing includes the risk of loss.**

This content is for informational and educational purposes only and not intended as investment advice or a recommendation to buy or sell any security. Investment advice and recommendations can be provided only after careful consideration of an investor's objectives, guidelines, and restrictions.
