Low Duration Fund Quarterly Review

William Blair

8472745

William Blair Low Duration Fund Important Disclosures

Please refer to the last page of this Review for definitions of the Indices used in this report.

Risks:
The Fund's returns will vary, and you could lose money by investing in the Fund. The Fund's investments in obligations issued or guaranteed by U.S. Government agencies or instrumentalities may not be backed by the full faith and credit of the United States and may differ in the degree of support provided by the U.S. Government. As interest rates rise, bond prices will fall and bond funds become more volatile. The Fund is subject to credit risk. The Fund's net asset value and total return may be adversely affected by the inability of the issuers of the Fund's securities to make interest payments or payment at maturity. International investing involves special risk considerations, including currency fluctuations, lower liquidity, economic and political risk. Investing in emerging markets can increase these risks, including higher volatility and lower liquidity. The Fund's investments in collateralized mortgage obligations are subject to prepayment and extension risk. Prepayment of high interest rate mortgage-backed securities during times of declining interest rates will tend to lower the return of the Fund and may even result in losses to the Fund if the prepaid securities were acquired at a premium. Slower prepayments during periods of rising interest rates may increase the duration of the Fund's mortgage-backed securities and asset-backed securities and reduce their value. This is not a money market fund. Rule 144A securities are not registered for resale in the general securities market and may be classified as illiquid. It may not be possible to sell or otherwise dispose of illiquid securities both at the price and within a time period deemed desirable by the Fund. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested.

The views expressed in this report and the information about the holdings are as of the date of this material, unless otherwise noted, and are subject to change. Information about the Fund's holdings should not be considered investment advice. There is no guarantee that the Fund will continue to hold any one particular security or stay invested in any one particular sector. Holdings are subject to change at any time.

Performance cited represents past performance. Past Performance does not guarantee future results and current performance may be lower or higher than the data quoted. Investment returns and principal will fluctuate with market and economic conditions and you may have a gain or loss when you sell shares. Current performance may be lower or higher than the data quoted. Class N shares are available to the general public without a sales load. Class I shares are available only to investors who meet certain eligibility requirements.

This content is for informational and educational purposes only and is not intended as investment advice or a recommendation to buy or sell any security. Investment advice and recommendations can be provided only after careful consideration of an investor's objectives, guidelines and restrictions.

Most recent month-end performance information for the Fund is available by visiting the William Blair Funds Web site at www.williamblairfunds.com, or by calling the William Blair Funds at 1-800-742-7272.

Please carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information is contained in the Fund's prospectus and summary prospectus, which you may obtain by calling +1 800 742 7272. Read the prospectus and summary prospectus carefully before investing. investing includes the risk of loss.

Market Commentary & Performance

March 2019

The Bloomberg Barclays U.S. Aggregate Index returned 2.94% during the first quarter of 2019 as declining interest rates and narrowing risk spreads created a period of strong performance. The Index returned 4.48% over the trailing twelve months ending 3/31/19.

The Federal Open Market Committee (FOMC) kept the target range of the federal funds steady during the first quarter at its range of 2.25% - 2.50%. Market participants changed their beliefs regarding future FOMC interest rate decisions during the quarter. The fed funds futures market implied that market participants expected the FOMC to cut the fed funds rate by 25 basis points by the end of 2019 with no probability of a hike.

The FOMC also updated their plans regarding the size and composition of the balance sheet. The FOMC had been permitting the balance sheet to reduce by no more than $50 billion per month since October 2017. The FOMC will permit the balance sheet to reduce by no more than $35 billion from May – September 2019 and by no more than $20 billion starting in October 2019.

The FOMC also communicated plans to change the composition of the balance sheet so that is comprised of primarily Treasury securities. The FOMC intends to allow the balance sheet's agency mortgage-backed securities (MBS) to decline at a rate of no more than $20 billion per month, while any cash flows generated in excess of $20 billion per month will be reinvested into Treasury securities. The FOMC also stated that "limited sales of agency MBS might be warranted in the longer run to reduce or eliminate residual holdings. The timing and pace of any sales would be communicated to the public well in advance."

The agency MBS Index generated positive total returns and excess returns during the first quarter. All coupon segments of the market achieved positive total and excess returns. Within 30-year pools, 4.0% and 4.5% coupon cohorts underperformed most other coupon cohorts as those segments had been the current production coupons and were therefore the most sensitive to prepayment risk given the decline in interest rates.

Corporate bonds experienced gains and outperformed other segments of the market during the first quarter following the challenging environment of the fourth quarter of 2018. All major market segments experienced gains. Longer-maturity corporate bonds outperformed shorter-maturity corporate bonds, while lower-quality segments outperformed higher-quality segments. Corporate bonds domiciled in emerging markets also generated strong gains.

The William Blair Low Duration Fund (Class N) outperformed the Bank of America/Merrill Lynch 1-Year Treasury Note Index during the first quarter. The Fund's holdings of higher-coupon agency mortgage-backed securities was additive to results. An allocation to floating-rate corporate bonds contributed to performance. Residual cash held in the Fund detracted from performance as short-term securities earned positive returns.

The William Blair Low Duration Fund underperformed the Bank of America/Merrill Lynch 1-Year Treasury Note Index over the trailing year ending 3/31/2019. Residual cash held in the Fund detracted from performance as short-term securities earned positive returns. The Fund's interest rate positioning and allocation to MBS had a muted impact on performance relative to the benchmark. Floating-rate corporate and asset-backed securities were additive to performance.

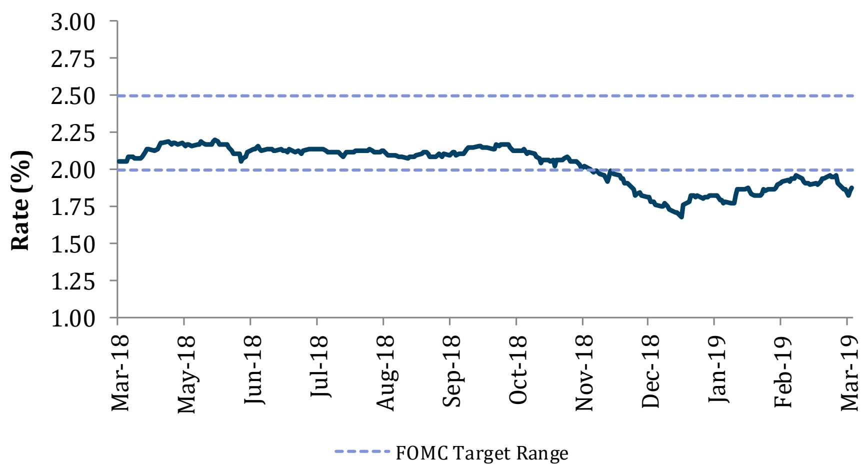
Treasury Market Overview

March 31, 2019

U.S. Treasury Yield Curve

	Total Return		1 YR Change in Yield		
	YTD	1 YR	3/29/19	3/29/18	Difference
3 Month	0.59%	2.12%	2.39	1.71	0.68
2 Year	0.97%	2.56%	2.26	2.27	0.00
5 Year	1.86%	4.37%	2.23	2.56	-0.33
10 Year	3.08%	5.60%	2.41	2.74	-0.33
30 Year	4.98%	6.26%	2.82	2.97	-0.16

10-Year Breakeven Inflation Rate



- U.S. Treasuries generated positive returns YTD as interest rates fell.
- TIPS outperformed nominal Treasuries YTD after adjusting for maturity.
- The current breakeven rates on U.S. TIPS are at levels below the lower end of the FOMC's stated target range for inflation of 2.0% - 2.5% per year.

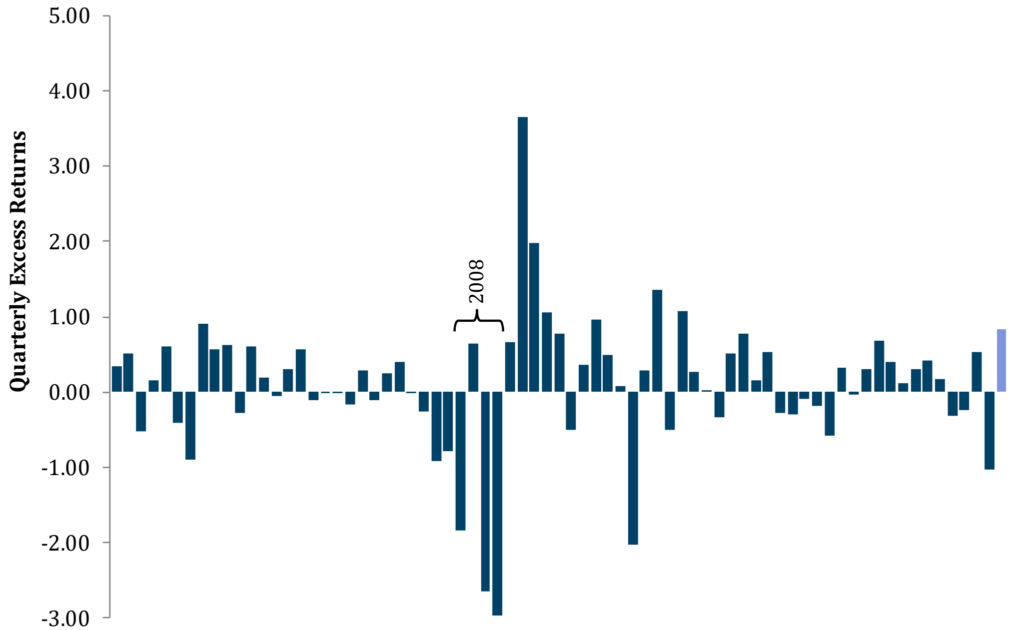
Fixed Income Spread Sectors Overview

March 31, 2019

Bloomberg Barclays Capital Aggregate Index – Since 2001



- The major spread sectors experienced positive excess returns YTD.
- Mortgage-backed securities generated positive excess returns YTD.
- The credit markets generated positive performance YTD: investment-grade corporate bonds, high yield corporate bonds, and emerging market-related bonds earned positive excess returns.
- Excess returns measure relative performance versus a duration-neutral basket of U.S. Treasuries.

Annual Excess Returns – Through 3/31/19

	Bloomberg Barclays Aggregate Index	U.S. Mortgage Backed Securities	U.S. Corporate Investment Grade	U.S. Corporate High Yield	EM USD Aggregate

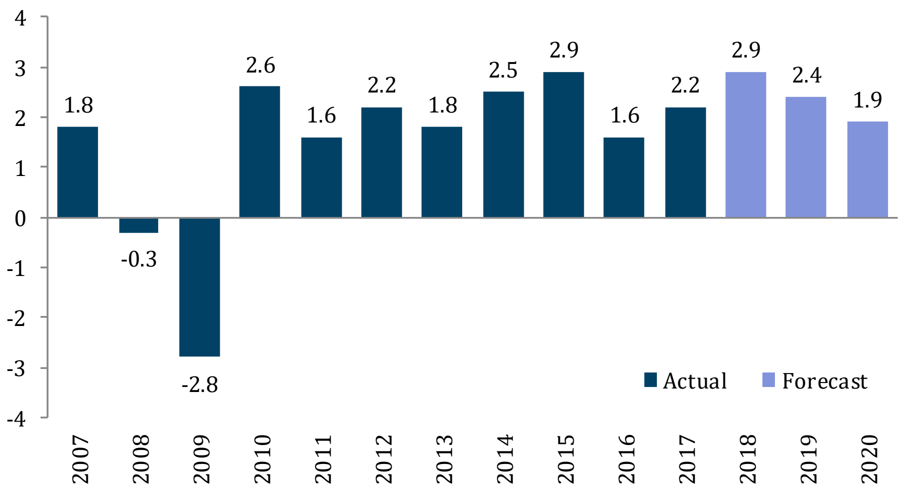
Past performance is not indicative of future returns. Excess Return is a security's return minus the return from a Treasury security of the same duration. The performance shown is for illustrative purposes and is not intended to represent the performance of any account or investment strategy managed by William Blair. A direct investment in an unmanaged index is not possible.

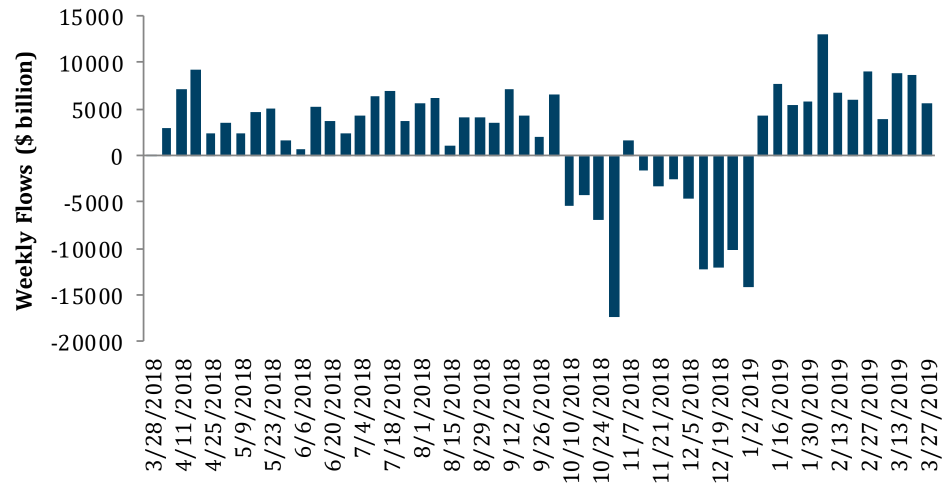
Credit Market Overview

March 31, 2019

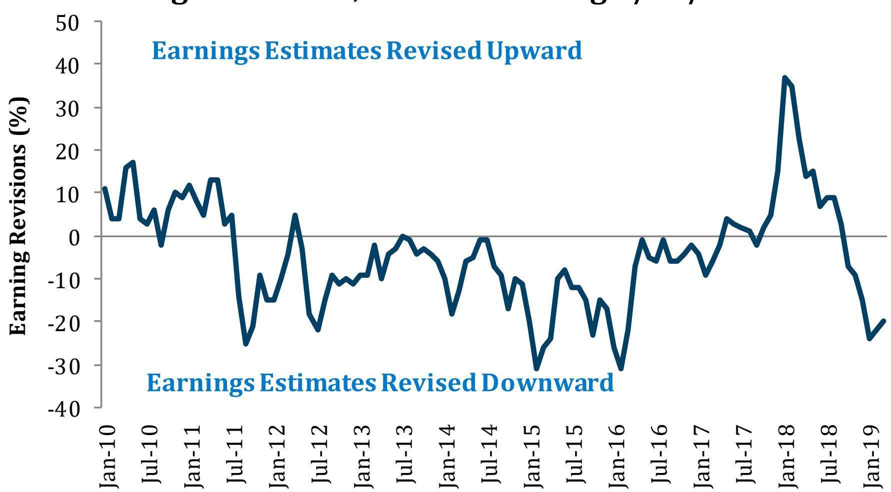
Real U.S. GDP Growth (%) Since 2007



ICI Taxable Bond Long-Term Mutual Fund and ETFs Flows



U.S. Earnings Revisions, 10 Years Ending 3/31/19



- Corporate bond risk spreads widened throughout the year in 2018, but then narrowed YTD in 2019.
- Corporate fundamentals are mixed. U.S. GDP is growing, and it is forecasted to grow steadily. Corporate leverage statistics remain relatively stable. Corporate earnings sentiment turned negative for a variety of reasons: it came off a high base following U.S. corporate tax reform in early 2018, concerns over trade wars, and/or equity market volatility.
- Fund flows had a negative impact on corporate bonds in 2018. Many technical factors impacted bonds negatively in 2018, including rising interest rates, a flattening yield curve, U.S. Treasury issuance patterns, and outflows from the asset class. Fund flows turned positive in 2019, and risk spreads tightened.

Low Duration Fund Performance

March 31, 2019

Performance %	Quarter	YTD	1 Year	3 Years	5 Years	Since Inception (12/1/09)
Low Duration Fund (WBLIX) Class I	1.21	1.21	2.12	1.31	1.21	1.27
Low Duration Fund (WBLNX) Class N	1.29	1.29	1.94	1.15	1.04	1.12
B of A ML 1-yr. U.S. Tsy Note	0.82	0.82	2.44	1.21	0.85	0.65
Morningstar Ultrashort Bond Category	1.02	1.02	2.39	1.75	1.18	

Performance cited represents past performance. Past Performance does not guarantee future results and current performance may be lower or higher than the data quoted. Results shown are average annual returns, which assume reinvestment of dividends and capital gains. Investment returns and principal will fluctuate with market and economic conditions and you may have a gain or loss when you sell shares. For the most current month end performance information, please call 1-877-962-5247, or visit our Web site at www.williamblairfunds.com. Class N shares are available to the general public without a sales load. Class I Shares are available only to investors who meet certain eligibility requirements.

Low Duration Fund Expense Ratios:

	Gross	Net
Class I Shares	0.45%	0.40%
Class N Shares	0.64%	0.55%

Expenses shown are as of the most recent prospectus. The Fund's Adviser has contractually agreed to waive fees and/or reimburse expenses to limit fund operating expenses until 4/30/19.

The Bank of America Merrill Lynch 1-Year U.S. Treasury Note Index is comprised of a single U.S. Treasury Note issue purchased at the beginning of the month and held for a full month. Each month the index is rebalanced and the issue selected is the outstanding U.S. Treasury Note that matures closest to, but not beyond, one year from the rebalancing date. A direct investment in an index is not possible.

The Morningstar Ultrashort Bond Category represents the average annual composite performance of all mutual funds listed in the Ultrashort Bond Category by Morningstar. Distributed by William Blair & Company, L.L.C., member FINRA/SIPC

Low Duration Fund Strategy

March 31, 2019

Decision Factor	Positioning	Strategy
Interest Rates & Yield Curve	Defensive	• The market predicts the FOMC will cut the target range of the federal funds rate by the end of 2019. The portfolio's duration remains defensive as unexpected changes in FOMC policy may create volatility. • Portfolios are allocated to floating-rate corporate and asset-backed securities, subject to client guidelines, in an effort to capture increasingly-competitive yields while mitigating the impact of an unexpected rise in interest rates
Treasuries & Agencies	Underweight	• No allocation to fixed-rate Treasuries. We believe valuations in the spread sectors, in particular agency MBS, ABS, and corporates, are appealing • No allocation to agencies. We currently find agency MBS valuations more attractive
Securitized Sectors	Overweight	• Allocation to agency MBS. We believe valuations of higher-coupon pools comprised of low loan balances are attractive as such pools offer superior spreads within the MBS sector, defensive duration posture, and manageable prepayment experiences • We avoid the lower-coupon MBS that dominate the MBS Index because we find that valuations are unappealing due to the Fed's targeting of the securities during their large-scale asset purchase programs. • Allocation to ABS. For accounts that allow, we find fixed- and floating-rate ABS that can offer attractive yields and protection against rising interest rates
Credit Sectors	Overweight	• Allocation to investment-grade industrials and financials. We seek to emphasize companies with positive free cash flows and strong and experienced management teams

*The credit quality of securities in the Fund is sourced through BlackRock Solutions and derived from Fitch Ratings, Moody's Investors Service, Inc. and Standard & Poor's. In cases where the credit rating agencies have assigned different credit ratings to the same security, the higher rating is used. In cases where only one rating agency has assigned a credit rating to a security, that rating is used.

Capital Markets Outlook

March 31, 2019

We believe that the Federal Open Market Committee (FOMC) will be data-dependent in its decision to change the target range of the federal funds rate in 2019. We believe that the FOMC will pay close attention to inflationary pressures in its future decisions to avoid risks associated with disinflation. The U.S. economy is growing; forecasters predict a real GDP growth rate of approximately 2.0% during 2019. In addition, the U.S. labor market is adding jobs and the unemployment rate is at 3.7%. Estimates of wage inflation are roughly 3.4%, while estimates of core personal consumption expenditures (PCE) have been roughly 1.8%. Macroeconomic theory predicts that a robust labor market creates wage inflation, which in turns spurs broader inflation.

We believe that the FOMC's plans to reduce the size of the Fed's balance sheet will continue to be executed with little disruption to the markets. We believe this is attributable, in part, to strong communication efforts and adequate advance notice. However, we believe the lower-coupon MBS that was purchased by the Fed will underperform higher-coupon alternatives when the FOMC ends their campaign of purchasing agency MBS.

U.S. Treasury Inflation-Protected Securities (TIPS) have market-implied breakeven inflation rates that are below the FOMC's stated target range of 2.0%–2.5%. We believe TIPS are an attractive alternative to fixed-rate Treasuries to mitigate the effects of rising rates driven by accelerating inflationary pressures.

We believe that spread sectors remain attractive relative to Treasuries over the intermediate-to-long term. We believe there are attractive opportunities in the corporate bond market, and we find risk premiums of higher-coupon segments of the agency MBS market attractive.

We believe that higher-coupon segments (30-year MBS coupon rates of 5.0% and above) of the agency MBS market offer compelling value. These segments of the agency MBS market offer attractive spreads and a defensive duration profile. The key risk of these securities is that the underlying borrowers are in-the-money to refinance their loan. We believe this risk can be mitigated by focusing on pools comprised of borrowers that do not have the economic incentive to refinance their loans: low-loan balance pools.

We believe that there are opportunities in the corporate bond market as risk spreads increased to levels above the Index's longer-term average. We remain concerned about company-specific risks, including shareholder-friendly activities such as leveraged finance mergers and acquisitions, large share repurchases, and special dividends. Importantly, we do not believe the market will enter a period of excessive LBO activity.

Index Definitions

BofA Merrill Lynch 1-Year U.S. Treasury Note Index: Comprised of a single U.S. Treasury Note issue purchased at the beginning of the month and held for a full month. Each month the index is rebalanced and the issue selected is the outstanding U.S. Treasury Note that matures closest to, but not beyond, one year from the rebalancing date.

Bloomberg Barclays Aggregate Bond Index: Composed of securities from the Barclays Aggregate Government/Corporate Bond Index, Mortgage-Backed Securities Index, and Asset-Backed Securities Index.

Bloomberg Barclays U.S. Corporate Index: measures the investment grade, fixed-rate, taxable corporate bond market.

Bloomberg Barclays Corporate High Yield Bond Index: Composed of fixed-rate, publicly issued, non-investment grade debt.

Bloomberg Barclays U.S. Credit Index: measures the investment grade, U.S dollar-denominated, fixed rate, taxable corporate and government-related bond markets. It is composed of the U.S. Corporate Index and a non-corporate component that includes non-U.S. agencies, sovereigns, supranationals and local authorities.

Bloomberg Barclays Emerging Market Bond Index: An unmanaged index that tracks total returns for external-currency-dominated debt instruments for emerging markets.

Bloomberg Barclays Intermediate Govt./Credit Bond Index: Fixed-rate government and corporate bonds rated investment grade or higher.

Bloomberg Barclays U.S. MBS Index: Measures the performance of investment grade fixed-rate mortgage-backed pass-through securities of GNMA, FNMA, and FHLMC.

Bloomberg Barclays U.S. TIPS Index: Includes all publicly issued U.S. Treasury inflation-protected securities that have at least one year remaining to maturity, are rated investment grade, and have $250 million or more of outstanding face value.

Bloomberg Barclays U.S. Treasury Index: measures U.S. dollar-denominated fixed-rate, nominal debt issued by the U.S. Treasury.

MSCI EAFE IMI Index: a free float-adjusted market capitalization index that is designed to measure equity market performance in the developed markets outside the United States.

MSCI Emerging Markets IMI Index: a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets.

S&P 500 Index: A measure of domestic equity market performance published by Standard & Poor's. It consists of 400 leading industrial issues, 20 transportation issues, 40 utilities and 40 finance issues weighted on a market capitalization basis. The S&P 500 is a broad-based index composed of domestic stocks representing 80% of the market value of all stocks traded on the New York Stock Exchange.

Indices are unmanaged, do not incur fees or expenses, and cannot be invested in directly.
