Portfolio Managers

**Risks:**

The views expressed in this report and the information about the holdings are as of the date of this material, unless otherwise noted, and are subject to change. Information about the Fund's holdings should not be considered investment advice. There is no guarantee that the Fund will continue to hold any one particular security or stay invested in any one particular sector. Holdings are subject to change at any time.

**The Fund's returns will vary, and you could lose money by investing in the Fund.** The Fund invests most of its assets in equity securities of small cap and mid cap domestic growth companies where the primary risk is that the value of the equity securities it holds might decrease in response to the activities of those companies or market and economic conditions. Individual securities may not perform as expected or a strategy used by the Adviser may fail to produce its intended result. Investing in small and medium capitalization companies involves special risks, including higher volatility and lower liquidity. Small and mid-cap stocks are also more sensitive to purchase/sale transactions and changes in the issuer's financial condition. Convertible securities may be called before intended, which may have an adverse effect on investment objectives. Diversification does not ensure against loss. The Fund is not intended to be a complete investment program. The Fund is designed for long-term investors.

**Performance cited represents past performance. Past Performance does not guarantee future results and current performance may be lower or higher than the data quoted. Results shown are average annual returns, which assume reinvestment of dividends and capital gains. Investment returns and principal will fluctuate with market and economic conditions and you may have a gain or loss when you sell shares. For the most current month end performance information, please call 1-877-962-5247, or visit our Web site at [www.williamblairfunds.com](http://www.williamblairfunds.com). Class N shares are available to the general public without a sales load. Class I and Class R6 shares are available only to investors who meet certain eligibility requirements.**

This content is for informational and educational purposes only and is not intended as investment advice or a recommendation to buy or sell any security. Investment advice and recommendations can be provided only after careful consideration of an investor's objectives, guidelines and restrictions.

*Investing includes the risk of loss. Please carefully consider the Fund's investment objective, risks, charges, and expenses before investing. This and other information is contained in the Fund's prospectus and summary prospectus, which you may obtain by calling 1-800-742-7272. Read the prospectus and summary prospectus carefully before investing. Investing includes the risk of loss.*

## Market Overview

The U.S. equity market showed resilience throughout the first half of 2023, reflected in the positive performance across U.S. equity indices, albeit with a wide range of performance across style and size dimensions. Despite investors' concerns regarding regional bank failures and higher interest rates, positive developments such as robust jobs growth and moderating inflation provided a strong counterbalance for the market.

During the first quarter, moderating inflation and strong employment data provided optimism for a soft landing. The Federal Open Market Committee (FOMC) increased the target Federal Funds Rate by 25 basis points in both February and March. In March, the market experienced a decline due to the collapse of Silicon Valley Bank and concerns surrounding smaller banks. This led to a rally in U.S. Government bonds as investors questioned the stability of smaller banks and anticipated a potential pause in Federal Reserve (Fed) tightening. Despite these challenges, the job market remained resilient, with notable employment gains in leisure, hospitality, retail trade, and healthcare, somewhat offset by employment declines in information technology.

U.S. equities continued their advance in the second quarter as the likelihood of further bank failures appeared to diminish and the economy displayed modest growth. The revised Q1 Gross Domestic Product (GDP) figures revealed a year-over-year expansion of 2.0%, surpassing the previous estimate of 1.3% growth. In May, the Consumer

Price Index (CPI) showed a year-over-year increase of +4.0%, underscoring ongoing inflationary pressures, albeit coming in lower than the multi-decade peak of +9.1% reported in June of 2022. The FOMC raised interest rates by 25 basis points in May, bringing the Federal Funds Rate to a target range of 5.00%-5.25%, the highest level since August 2007.

## Fund Performance

During the second quarter, the Small-Mid Cap Growth Fund (Class N) performed approximately in line with the return of the Russell 2500 Growth Index. Relative performance drivers were primarily stock specific. Top contributors to performance were our positions in Builders FirstSource (Industrials) and MongoDB (Information Technology). Shares of Builders FirstSource, a materials manufacturer and distributor for home builders, benefited from demand strength in the multi-family unit end market, as well as continued share repurchases and favorable guidance. MongoDB provides the world's leading NoSQL database and demonstrated strong sales execution and new customer additions in the quarter. Other strong performers included Inspire Medical Systems (Health Care), Encompass Health (Health Care) and Martin Marietta Materials (Materials). Top detractors from performance were Mercury Systems (Industrials) and Revolve Group (Consumer Discretionary). Shares of Mercury Systems, a provider of sensor processing subsystems, declined on near term profit pressures amidst manufacturing and supply chain challenges. Online fashion retailer Revolve Group experienced cost headwinds and a challenging

macroeconomic environment. Other laggards included Axon Enterprise (Industrials), Certara (Health Care) and NICE Ltd. (Information Technology). Stock specific contributors and detractors for the second quarter are discussed in greater detail at the end of this quarterly review.

Over the year-to-date period, the portfolio trailed the performance of the Russell 2500 Growth Index driven by stock specific dynamics. Stock selection in Consumer Discretionary, including our position in National Vision Holdings, detracted from relative performance. National Vision Holdings, the largest value optical retailer in the U.S., was negatively impacted by a shortage in optometrists, resulting in a lack of available exam slots and pressuring revenue and margins in the near term. Other notable detractors included our positions in Mercury Systems (Industrials), New Fortress (Energy), Western Alliance Bancorp (Financials) and CF Industries (Materials). Positive stock selection in Industrials, including our position in Builders FirstSource, and Energy, including our position in Cameco, added value during the period. Other top contributors included National Instruments (Information Technology), MongoDB (Information Technology) and Penumbra (Health Care). National Instruments designs and manufactures test and measurement tools utilized in the testing of electrical products. The company announced it would be acquired by Emerson Electric.

## **Outlook**

As we enter the second half of the year, there is potential for the Fed's rate-hiking cycle to exert a slowing effect on

economic growth. While the pace of inflation has moderated, it remains above the Fed's target level, indicating the possibility of additional interest rate increases. Although the full impact of rate increases over the past 18 months has yet to be felt, there are already noticeable effects as lending conditions tighten for businesses, consumers, and real estate developers. Despite these potential headwinds, the current backdrop of a slowly expanding economy, robust consumer spending on areas such as travel and leisure, and new job growth offers support for equity investors.

Looking ahead, companies with strong balance sheets, durable business models, sustainable cash flow, and the ability to self-fund growth are likely to be uniquely positioned as the economic landscape unfolds. We believe our philosophy of identifying durable businesses whose stocks present attractive risk/reward opportunities should serve us well in a variety of economic environments, as it has historically.

**Past Performance is not a guarantee of future results.** A direct investment in an index is not possible.

The Russell 3000 Index measures the performance of the all-cap segment of the U.S. equity universe. The Russell 1000 Index measures the performance of the large-cap segment of the U.S. equity universe. It includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership. The Russell Midcap Index measures the performance of the mid cap segment of the U.S. equity universe. It includes approximately 800 of the smallest securities in the Russell 1000 Index based on a combination of their market cap and current index membership. The Russell 2500 Index measures the performance of the small to mid-cap segment of the U.S. equity universe. It includes approximately 2500 of the smallest securities in the Russell 3000 Index based on a combination of their market cap and current index membership. The Russell 2000 Index measures the performance of the small cap segment of the U.S. equity universe. It includes approximately 2000 of the smallest securities in the Russell 3000 Index based on a combination of their market cap and current index membership. Core returns represent the Total Return indices. The value segments of these indices include companies with lower price-to-book ratios and lower forecasted growth values. The growth segments of these indices include companies with higher price-to-book ratios and higher forecasted growth values.

Please refer to the 'Important Disclosures' section of this document for further information.

### Market Performance

- U.S. equities advanced in the second quarter as the economy displayed modest growth and inflation continued to moderate.
- The revised Q1 Gross Domestic Product (GDP) figures revealed a year-over-year expansion of 2.0%, surpassing the previous estimate of 1.3% growth.
- In May, the Consumer Price Index (CPI) showed a year-over-year increase of +4.0%, underscoring ongoing inflationary pressures, albeit coming in lower than the multi-decade peak of +9.1% reported in June of 2022.
- The Federal Open Market Committee (FOMC) raised interest rates by 25 basis points in May, bringing the Federal Funds Rate to a target range of 5.00%-5.25%, the highest level since August 2007.

### Style Performance

- In June, there was minimal performance dispersion between growth and value benchmarks.
- For the quarter and year-to-date periods, growth benchmarks outperformed value benchmarks, with a more significant spread over the year-to-date period.

### Market Cap Performance

- In June, smaller caps outperformed larger caps across the style spectrum.
- For the quarter and year-to-date periods, larger caps outperformed smaller caps across the style spectrum. The performance spread in the growth benchmarks was much wider between market cap segments for both periods compared to a narrower spread in the value benchmarks.

**Past returns are no guarantee of future results.** Based on Global Industry Classification Standard (GICS) Sectors. Concentration of assets in one or a few sectors may entail greater risk than a fully diversified stock portfolio and should be considered as only part of a diversified portfolio. Please refer to the 'Important Disclosures' section of this document for further information.

**Builders FirstSource (BLDR)** is a materials manufacturer and distributor for home builders. The company is the largest value-added manufacturer in the industry by total revenue, geographic coverage, total facilities, and product scope. Builders FirstSource reported better than expected first quarter earnings results driven by higher than anticipated revenues and margins associated with the company's highest value product offerings, particularly in the multi-family market. Moreover, the company continued to repurchase shares and offered a positive outlook due to its robust platform and shift to higher value-added products. Management has demonstrated strong execution thanks to its robust platform, efficiency initiatives, and a strategic shift towards value-added products. As the share price has appreciated and the valuation multiple has moved higher, the risk/reward profile became incrementally less compelling and we trimmed our position.

**MongoDB (MDB)** is the provider of the world's leading NoSQL database. The company reported robust earnings results during the quarter, driven by strength in Enterprise Advanced and Atlas. Additionally, MongoDB benefited from healthy new workload acquisitions, evidenced by strong sales execution and new customer additions. We believe MongoDB will continue to be a leader and gain share in the growing and underpenetrated NoSQL database market but trimmed our position on a less compelling risk/reward for the stock.

**Inspire Medical Systems (INSP)** is a medical device company focused on neurostimulation of the hypoglossal nerve for the treatment of moderate to severe obstruction sleep apnea (OSA). The company's device is implanted in the patient and delivers stimulation to the hypoglossal nerve, which maintains an open airway. Strength in the quarter was fueled by robust U.S. volumes and ongoing positive utilization trends, leading to year-over-year revenue growth of over 80%. Furthermore, the company expanded its reach by adding sixty-eight new centers during the period. We maintained our position and continue to believe that Inspire is well-positioned to execute its commercial strategy driven by increased utilization at existing centers, the activation of new sites, and continued improvements in patient pre-surgical planning.

This information does not constitute, and should not be construed as, investment advice or recommendations with respect to the securities listed. Specific securities identified and described do not represent all of the securities purchased, sold, or recommended for advisory clients, and you should not assume that investments in the securities identified and discussed were or will be profitable.

**Mercury Systems (MRCY)**, a provider of sensor processing subsystems, reported better than expected revenues and earnings, but issued weak guidance due to poor manufacturing yields caused by supply chain problems. The company expects margins to expand and trend back closer to pre-pandemic levels over the next year. At the same time, the company completed its strategic review and is focused on improved execution under new management. We believe the company offers sustainable growth potential over the long-term, driven by a long runway for outsourcing and acquisition opportunities. We maintained our position.

**Revolve Group (RVLV)** is an online fashion retailer that sells owned, established and emerging brands targeting Millennial and Generation Z consumers across its two segments, Revolve and Forward. The company reported lower-than-expected sales and volumes during the quarter amid cost headwinds and a challenging macroeconomic environment. Despite near-term pressure, customer engagement remains high, and the company is well positioned to weather transitory headwinds given its strong balance sheet and durable business model. We added to our position on the weakness and continue to believe Revolve Group has a strong and differentiated brand that will continue to gain share in the rapidly growing online apparel market.

**Axon (AXON)** is a leading provider of law enforcement technology including conducted energy devices (branded TASER), on-officer and in-car cameras, as well as cloud-based digital evidence management software. Axon's overarching goal is to protect life through its stated mission to obsolete the bullet, reduce social conflict and enable a fair and effective justice system. While the company reported strong revenues and meaningfully increased guidance during the quarter, the earnings results were below elevated expectations following strong year-to-date stock performance, putting pressure on shares. However, Axon continues to execute well, and growth was robust across products and segments. Demand trends across the public safety environment remain positive. We maintained our position and continue to believe the company is well positioned to benefit from a healthy demand environment for all of its product offerings given the secular shift toward use of non-lethal force in the U.S. and internationally.

This information does not constitute, and should not be construed as, investment advice or recommendations with respect to the securities listed. # Glossary - Terms

**Active Share:** A measure of the percentage of equity holdings in a portfolio that differ from the benchmark index. It is calculated by taking the sum of the absolute value of the differences of the weight of each holding in a portfolio versus the weight of each holding in the index and dividing by two.

**Alpha:** A measure of a portfolio's return in excess of the market return, after both have been adjusted for risk. It is a mathematical estimate of the amount of return expected from a portfolio above and beyond the market return at any point in time. For example, an alpha of 1.25 indicates that a stock is projected to rise 1.25% in price in a year over the return of the market, or the return when the market return is zero. When an investment price is low relative to its alpha, it is undervalued, and considered a good selection.

**Beta:** A quantitative measure of the volatility of the portfolio relative to the overall market, represented by a comparable benchmark. A beta above 1 is more volatile than the overall market, while a beta below 1 is less volatile, and could be expected to rise and fall more slowly than the market.

**Developed Markets:** Using the Morgan Stanley Capital International (MSCI) geographic definition, this region includes: United Kingdom, Europe (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Norway, Spain, Sweden and Switzerland), Japan, Pacific Asia (Australia, Hong Kong, New Zealand, and Singapore) and the Western Hemisphere (Canada and other Americas).

**Debt to Total Capital Ratio:** This figure is the percentage of each company's invested capital that consists of debt. Companies with a high Debt to Total Capital level may be considered more risky. From a portfolio perspective, the portfolio Debt to Total Capital Ratio is a weighted average of the individual holdings' Debt to Total Capital Ratio.

**Emerging Markets:** Using MSCI's geographic definition, this region includes: Emerging Markets Asia (China, India, Indonesia, Malaysia, S Korea, Taiwan, and Thailand), Emerging Markets Europe, Mid-East and Africa (Czech Republic, Hungary, Poland, Russia, Turkey, Egypt, Morocco, and S Africa), and Latin America (Argentina, Brazil, Chile, Columbia, Mexico, Peru and Venezuela).

**EPS (Earnings Per Share) Growth Rate (Projected):** This measure represents the weighted average of forecasted growth in earnings expected to be experienced by the stocks within the portfolio over the next 3-5 years. From a portfolio perspective, the portfolio P/E ratio and EPS Growth Rate are weighted averages of the individual holdings' P/E ratios and EPS Growth Rates. Data calculated in FactSet.

**EV/EBITDA: (Enterprise Value / Earnings Before Interest, Taxes and Depreciation-Amortization):** The EV/EBITDA ratio is useful for global comparisons because it ignores the distorting effects of individual countries' taxation policies. It's used to find attractive takeover candidates. Enterprise value is a better measure than market cap for takeovers because it takes into account the debt which the acquirer will have to assume. Therefore, a company with a low EV/EBITDA ratio can be viewed as a good takeover candidate.

**EV/IC: (Enterprise Value / Invested Capital) Ratio:** Enterprise Value (EV), which is market capitalization minus cash plus debt divided by Invested Capital (IC), which is the sum of common stock, preferred stock and long-term debt. This number will get you a simple multiple. If it is below 1.0, then it means that the company is selling below book value and theoretically below its liquidation value.

**Information Coefficient:** A measure of the correlation between expected and actual returns.

**Information Ratio:** A measure of risk-adjusted return. The annualized excess return of the portfolio relative to a respective benchmark, divided by the annualized tracking error relative to that same benchmark. The higher the measure, the higher the risk-adjusted return.

## Glossary - Terms

**PBV: (Price/Book Value) Ratio:** The PBV Ratio measures the value of a company's common stock relative to its shareholder's equity. A price-to-book multiple above one means that the price of the company's common stock is higher than its common shareholder's equity. A price-to-book multiple below one means that the price of the company's common stock are less than its break-up value, and the shares may be undervalued.

**PCF: (Price/CashFlow):** Some analysts favor the price/cash flow over the price-earnings (PE) ratio as a measure of a company's value. Cash flow is a measure of a company's financial health. It equals cash receipts minus cash payments over a given period of time.

**P/E: (Price/Earnings) Ratio:** This is the most common measure of how expensive a stock is. Simply, it is the cost an investor in a given stock must pay per dollar of current annual earnings. A high P/E generally indicates that the market is paying more to obtain the stock because it has confidence in the company's ability to increase its earnings. Conversely, a low P/E often indicates that the market has less confidence that the company's earnings will increase rapidly or steadily, and therefore will not pay as much for its stock.

**R-squared:** A measurement of how closely the portfolio's performance correlates with the performance of its benchmark, such as the MSC AC World Free ex US Index. In other words, it is a measurement of what portion of a portfolio's performance can be explained by the performance of the overall market or index. Ranges from 0 to 1, where 0 indicates no correlation and 1 indicates perfect correlation.

**Risk (Standard Deviation):** A measure of the portfolio's risk. A higher standard deviation represents a greater dispersion of returns, and thus a greater amount of risk. The annualized standard deviation is calculated using monthly returns.

**Sharpe-Ratio:** A risk-adjusted measure calculated using standard deviation and excess return (Portfolio return – Risk Free Rate) to determine reward per unit of risk. The higher the Sharpe ratio, the better the portfolio's historic risk-adjusted performance.

**Tracking Error:** Tracking Error measures the extent to which a portfolio tracks its benchmark. The tracking error of an index portfolio should be lower than that of an active portfolio. The tracking error will always be greater than zero if the portfolio is anything other than a replication of the benchmark.

**Trailing 1-Year Turnover:** This figure reflects the portfolio's trading activity by calculating the amount of the portfolio's holdings bought or sold over the prior year, expressed as a percentage of the portfolio's average market value. Turnover figures may be related to the amount of trading costs experienced by the portfolio.

**Weighted Average Market Capitalization:** Market capitalization refers to the total market value of each company's outstanding shares. The Weighted Average Market Capitalization for a portfolio is calculated as the average market capitalization of the stocks within the portfolio, weighted by the amount of each stock owned.

**Weighted Median Market Capitalization:** This calculation represents the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock owned.
